

IFLEX DIGITAL LED STRIP | RGB

RGB

IF-D-5

iFlex Digital LED Strip uses the latest technology super bright SMD LEDs. It then uses microchips to provide segmented control with constant current. This extends the LEDs life span and colour consistency while allows dramatic colour changes and chasing patterns.

iFlex Digital LED Strip produces colour scrolling, synchronization, sequences and flashing and can be controlled from a smart phone or tablet using our iFlex Digital LED strip controller. There are 90 pre-programmed effects than can be selected to give your lighting project the WOW factor.

It is as easy to light up and install as our other flexible strip lights and can be cut every 9 LEDs or joined to form up to 100 meter lengths. For easy mounting and installation there is 3M double-sided tape on the back - just peel and stick.

Key Specification

LED Density / Qty/m	60
LED Chip Type	5050
Power Rating	14.4W/m
Luminous Flux	Red 108/ Green 300/ Blue 96
IC Type	WS2814
Cutable Length	Every 50mm
Power Input	5V
Beaming Angle	120 Degree
Dimming	Digital RGB Control
Waterproof	Non-Waterproof
Strip Width	10mm
Warranty	2 Years Warranty

Product	Colour	CCT	Power Input	IP Rating
RGB	RGB	  	5V	-

ACCESSORIES REQUIRED

- Power Supply
- Diffuser Profile
- Joiners
- Extended Tail
- Remote
